TODD CLARKSTON

LEAD SOFTWARE ARCHITECT | .NET & AZURE | FINTECH & HEALTHCARE SYSTEMS

Centennial, CO (remote/hybrid/on-site) | 720-402-4347 | todd@toddclarkston.com | linkedin.com/in/toddclarkston | github.com/wireservers

PROFESSIONAL SUMMARY

Lead Software Architect and hands-on full-stack engineer with 20+ years delivering secure, enterprise-grade fintech, healthcare, and SaaS platforms with .NET, React Native, and Azure. Architected a greenfield EHR serving about 4,000 users and 2,700 patients across nine facilities while leading a five-person team, and built Federal Reserve bank-examination software used by 1,000 examiners nationwide. Applies AI in production, from Azure AI vision, document intelligence, and speech services to an LLM document-extraction platform with 99% accuracy.

CORE TECHNOLOGIES

Architecture & Back End: Solution architecture, C#, .NET 10 / ASP.NET Core, Web API, Entity Framework, REST APIs, microservices, SQL Server, Python (Flask, Django, ETL), xUnit / NUnit

Front End & Mobile: React Native, React Native Web, React, TypeScript, JavaScript, Angular, reusable component systems

Cloud, Delivery & Security: Microsoft Azure, App Service, Azure Functions, Azure SQL, AWS Lambda, Bicep / ARM templates, Application Insights, GitHub CI/CD, Azure DevOps, Entra ID / MSAL, CIAM, Docker, OAuth/OIDC, OWASP, HIPAA, SOC 2-aligned and PCI DSS-aligned controls

Data & Messaging: SQL Server, PostgreSQL, MySQL, MongoDB / Cosmos DB, Redis Cache, RabbitMQ, Azure Service Bus

AI: Azure OpenAI / OpenAI, Azure AI vision, document intelligence, and speech, document extraction with model fallback; Claude Code and agentic workflows for code generation, review, and testing

Healthcare & Integration: EHR/EMR, PACE, HL7, FHIR / Azure FHIR, clinical workflows, appointment management

Financial Services: Federal Reserve banking and bank-examination systems, transaction data, personal finance, PCI DSS

PROFESSIONAL EXPERIENCE

CenterLight Healthcare (via C2Q) | **Lead Architect (Application Developer III)**

Oct 2025–Present | New York, NY (Remote)

- Architected and lead development of a greenfield Electronic Health Record platform serving about 4,000 users and 2,700 patients across nine facilities, releasing to Development multiple times a day, UAT weekly, and Production each quarter.
- Lead a five-person engineering team, setting application architecture, development standards, code-review practices, and delivery priorities while staying hands-on across the stack.
- Integrated Azure Foundry Vision, Azure AI Document Intelligence, and Azure Speech into clinical and operational EHR workflows.
- Designed and built a CMS-style form builder that replaced a confusing legacy form designer, cutting form creation from about an hour to 10 minutes; agents build forms without code changes, with security configurable down to individual fields.
- Designed and implemented a custom CIAM/SSO server integrated with Microsoft Azure single sign-on and SOC 2-aligned security controls.
- Integrated HL7 messaging and Azure FHIR services for healthcare interoperability and HIPAA-compliant handling of protected health information.
- Built the cross-platform application with React Native Web, .NET 10 Web API, C#, Entity Framework, and SQL Server; managed full CI/CD pipelines in GitHub across Development, UAT, and Production, with slot-swap rollback.
- Use Claude Code with reusable skills and agentic workflows to speed up code generation, reviews, and testing.
- Instrumented the EHR to flag Key Vault, connection-string, and expired-key failures in UAT logs.

WireServers LLC | **Owner & Principal Consultant**

2009–2025 | Highlands Ranch, CO

Consulting practice, run alongside full-time roles, serving about 40 clients (10 repeat); led a four-developer team and owned architecture, delivery, and client relationships.

- Integrated OpenAI into multiple client apps for document OCR, classification, and summarization, with multi-model provider fallback and token-usage tracking.
- Built Python services for clients, including three years of Flask and Django for Series Code, ETL imports and data mapping, Azure Functions, and an AWS Lambda geolocation service for a geocaching-style app that verifies check-ins with hardware at each site.
- eLivelihood: Oversaw development and maintenance of a family care-management dashboard as DevOps, full-stack, and technical lead (Angular, Firebase, Ionic).
- Established delivery practices across clients, including code review, automated testing, CI/CD on Azure DevOps and AWS with production deploys multiple times a week, and PCI DSS-aligned controls for financial applications.

WellDyneRX (via TEKsystems) | **Senior Software Developer**
2018–2019 | Centennial, CO

- Developed MVC/C#, ASP.NET Web API, and SQL Server solutions for a pharmacy benefit manager processing approximately 15 million prescriptions annually; helped redesign a key enterprise application, increasing performance and scalability by 30%.
- Automated multi-day verification, fulfillment, and shipping workflows with RabbitMQ, replacing manual processing with queue-driven orchestration.
- Reduced deployment time by 40% by automating Azure DevOps CI/CD pipelines, migrated legacy systems to Docker, and remediated OWASP Top 10 and SonarQube-flagged security vulnerabilities in HIPAA-regulated systems.

Federal Reserve Bank of Kansas City | **Senior Software Engineer (Team Lead & Architect)**
2014–2018 | Denver, CO

- Led a cross-functional team delivering a mission-critical MVC/C#, Angular, ASP.NET Web API, and SQL Server application on time and under budget, increasing team velocity by 25%, raising code-quality metrics 35% with SonarQube, and mentoring 5+ junior developers.
- Built the national Examiner Application, an MVC single-page app with RESTful services giving 1,000 bank examiners across all 50 states access to each bank's information and history.
- Joined the New York Fed's National team building software for all 12 Reserve Banks: an audit logger, an RBAC/ReBAC security model, and, with an architect counterpart, the move to .NET Core and a national component library.

Earlier experience: Visa, J.P. Morgan Chase (via TEKsystems), Pensco Trust, Quark, eBags, LANDesk

SELECTED PRODUCTS & OPEN-SOURCE WORK

React-Natives | **Creator / Maintainer**
Current | github.com/wireservers/react-natives | npm: @wireservers/react-natives

- Created and published a cross-platform library of 70+ reusable, themeable components for React Native and web applications, used in production by BringTheBudget.

BringThe... Budget | **Creator / Full-Stack Engineer**
Current | bringthebudget.com

- Built an AI budgeting app that extracts accounts, transactions, and debts from Word, PDF, CSV, image, and other files using vision models with fallback processing; owned app, API, and cloud delivery.
- Reaches 99% extraction accuracy and processes about 100 documents in under a minute.

BringThe... Diet & Food API | **Creator / Architect**
Current | bringthediet.com

- Built a recipes and diet-planning web app on Next.js and React, backed by a .NET 10 REST API on Azure App Service and Cosmos DB.

EDUCATION & CREDENTIALS

Education: B.S., Computer Information Systems (Expected 2030), Metropolitan State University of Denver
Credentials: Microsoft Certified Professional; Scrum Master Certified (Scrum Alliance); recurring HIPAA privacy and security training
