.NET Core 1-10	10 years
RESTful ASP.NET MVC/Web API	14 years
Django / Flask	3+ years

LANGUAGES

JavaScript/HTML/CSS	20+ years

Work History

CenterLight Healthcare (via C2Q) New York, NY (Remote)	**Lead Architect (Application Developer III)** October 2025 - Present

⚙ Architected a large greenfield Electronic Health Record (EHR) platform comparable to commercial EHRs such as athenahealth, serving about 4,000 users and 2,700 patients across nine facilities, releasing to Development multiple times a day, UAT weekly, and Production each quarter.

⚙ Led a team of five as hands-on architect and developer, owning technical direction, code quality, and delivery.

⚙ Designed a CMS-style form builder and workflow engine that replaced a confusing legacy form designer, cutting form creation from about an hour to 10 minutes and letting staff configure clinical and operational processes without code changes; agents have embraced the new experience.

⚙ Delivered a complete scheduling module for appointments and care coordination.

⚙ Implemented full Azure SSO and built a custom SOC 2–compliant CIAM (Customer Identity and Access Management) server.

⚙ Ensured HIPAA compliance and built healthcare interoperability with HL7 and the Azure FHIR service.

⚙ Built the cross-platform front end with React Native Web and the back end as a .NET 10 Web API in C# with Entity Framework and SQL.

⚙ Built Azure workflows using Azure Functions and App Services, with Git and full CI/CD pipelines across Dev, UAT, and Production.

⚙ Accelerated development with Claude Code, using advanced prompting, reusable skills, and agentic workflows for code generation, reviews, and tests.

CenterLight Healthcare is the largest not-for-profit Program of All-Inclusive Care for the Elderly (PACE) in the nation.

WireServers Denver/Highlands Ranch, CO	**Owner & Principal Consultant** June 2009 - 2025

⚙ Led architecture and full-stack delivery for client projects as Lead Architect and Team Lead, mentoring developers from junior to architect level.

⚙ Integrated OpenAI into multiple apps for document OCR, classification, and summarization, designing multi-model LLM architectures with provider fallback and per-call token usage tracking.

⚙ Built AI developer tooling with Claude Code: custom skills, MCP server integrations, and codified prompts for agentic coding, code review, and test generation.

⚙ Ran DevOps on Azure DevOps and AWS (Lambda, API Gateway, CloudFormation) with Docker, AKS, and full CI/CD, deploying to production multiple times a week.

⚙ Full-stack development across ASP.NET MVC/Core, Angular, React/React Native/Next.js, Knockout, Django, Flask, Xamarin Forms, WPF, and WCF.

⚙ Built Python services: Flask and Django for Series Code (three years), ETL, Azure Functions, and an AWS Lambda geolocation service.

⚙ Designed Web APIs, RESTful services, SOA, and microservices, including AWS API Gateway integrations.

⚙ Drove security and risk mitigation, including OWASP Top 10, and provided application support and proofs of concept.

WireServers is my consulting practice, run alongside full-time roles, serving about 40 clients (10 repeat) with a team of four developers across healthcare, finance, e-commerce, and SaaS. Selected projects: bringthebudget.com (a commercial personal finance application), bringthediet.com, eLivelihood, sentandsecure.com, bionatal.co, BurstIQ, fitnessoneapp.com, and swoovy.com.

WellDyneRX (via TEKsystems) Centennial, CO	***Sr. Software Developer*** *May 2018 – July 2019*

⚙ Reduced deployment time by 40% by automating Azure DevOps CI/CD pipelines and PowerShell deployments.

⚙ Developed HIPAA-compliant prescription processing systems handling protected health information (PHI), with HL7 messaging for pharmacy and healthcare data exchange.

⚙ Built RabbitMQ pub/sub messaging for long-running prescription verification, fulfillment, and shipping processes that previously took days.

⚙ Helped redesign the architecture of a key enterprise application, increasing system performance and scalability by 30%.

⚙ Provided architecture guidance and proof-of-concept development across teams.

⚙ Led the migration of legacy systems to Docker containers, improving stability and easing deployments.

⚙ Remediated OWASP Top 10 and SonarQube-flagged security vulnerabilities in HIPAA-regulated systems.

⚙ Mentored junior and mid-level developers.

⚙ Provided query and database support using SQL scripts, LINQ, and Entity Framework.

WellDyneRx is one of the nation's top Pharmacy Benefit Managers (PBMs). They specialize in high-capacity prescription mail order services and retail pharmacy management. The prescription mail ordering services currently process 15 million orders a year.

Technology *MVC/C#, ASP.NET Web API (RESTful), Knockout.js, Enterprise Library, jQuery, Twitter Bootstrap 4, SQL, RabbitMQ, Azure DevOps CI/CD pipelines*

Federal Reserve Bank of Kansas City
Denver, CO

Senior Software Engineer (Team Lead & Architect)
July 2014 – April 2018

⚙ **Architect**

- Evaluated and set direction for application security.
- Coordinated between districts on security, quality, and usability approvals; led security-compliance integration that reduced audit findings.
- Created coding standards and architectural guidelines adopted across multiple development teams.
- Joined the New York Fed's National team building shared software for all 12 Reserve Banks: an audit logger, an RBAC/ReBAC security model, and .NET Core components.
- Evaluated external vendor software.

⚙ **Lead developer**

- Team lead of 4 developers, 1 SQA, and 1 DBA.
- Mentored 5+ junior developers and supported mid-level and senior team members.
- Coordinated with other leads, project managers, and business analysts.
- Improved code-quality metrics by 35% with SonarQube and peer reviews.
- Increased team velocity by 25% through improved coordination and Agile practices.
- Collaborated with DevOps and other technical teams across the system.

⚙ **Sr. Software Engineer**

- Full-stack development of the national Examiner Application, used by 1,000 bank examiners across all 50 states; delivered on time and under budget.
- Designed tables and stored procs in SQL.
- Created technical documents for knowledge transfer of undocumented legacy products and processes.

FRB is considered the bank of banks. They are responsible for controlling the nation's monetary policy, supervising and regulating banks, and maintaining financial system stability of the United States. The KC branch employs 11,000 people across 4 banks.

Technology *MVC/C# 5.0, Angular 2-5, ASP.NET Core Web API (RESTful), Enterprise Library, Entity Framework, Typescript, Knockout.js, jQuery, OO JavaScript, Bootstrap*

Pensco Trust

Web Developer III

Denver, CO	February 2013 – December 2013

⚙ Architected a modular RESTful service layer that reduced integration time for new features by 35%.

⚙ Refactored data access with Dapper, boosting query performance 40% on high-traffic endpoints; designed tables, stored procedures, and REST services.

⚙ Scrum facilitator for the Agile transformation, improving sprint velocity and delivery predictability by 20%.

⚙ Improved front-end load times by 25% with lazy loading and optimized require.js module usage.

Pensco is a trust fund company that targets the alternative asset market. They were one of the pioneers and are now one of the leaders of this type of investment.

Client/Advisor Application – This application is a Single-Page App, RESTful Service application that provides clients and advisors with the ability to manage these accounts. It provides a dashboard for users to view asset allocations, account types, transactions, account activity, and manage alerts.

Technology	*MVC/C# 4.0, ASP.NET Web API (RESTful), Ninject, Oracle 10g, Enterprise Library, Dapper, jQuery, OO JavaScript, mustache.js, Twitter Bootstrap 3, pubsub.js, require.js, and underscore.js.*
